In-Building Wi-Fi

Add a sought-after amenity that makes you money

If you're a residential or commercial landlord, condo association, or marina, we can help you attract new tenants and

earn extra revenue by operating a Wi-Fi network at your facility. We provide, install, and maintain the equipment and Internet connection, and pay you a share of the revenues we collect at your location. Anyone with a Wi-Fi compatible computer, PDA, or phone can sign themselves up online, so it's an effortless way for you to add an amenity and generate additional cash.

In-Building Wi-Fi.....Free to Qualified Locations

Private Wi-Fi

Attract more customers by offering free Internet access at your location

Businesses of all kinds — bars, restaurants, health clubs, laundromats, hotels, theaters, etc. — have discovered that offering free Wi-Fi service brings in new customers and drives up sales. To make it easy, we offer a turn-key Wi-Fi package:

Internet access, Wi-Fi equipment, installation, maintenance, and customer support, all for one low monthly price. Get into Wi-Fi without getting in over your head, with a Port Networks Private Wi-Fi Network.

Private Wi-Fi Network\$149/month

Small Office/ Home Office **Internet**

Get connected without the hassle, from a company that cares about you as a customer

In many areas, cable TV and phone companies have a tough time providing fast, reliable Internet connections. If you're in one of those areas, or you're simply tired of dealing with a conglomerate that could care less about your business, we have an alternative. Our SOHO Wireless Service provides speeds comparable to DSL and cable connections, together with hands-on support from a local provider, all at a monthly price that fits your budget.

If you ever need more speed, it's easy to upgrade to our 1Mbps or 2Mbps symmetric service, which give you the capacity of a T1 line at a very attractive price.

SOHO Wireless Service	\$99/month
1 Mbps Wireless Service	\$199/month
2 Mbps Wireless Service	\$349/month

Internet Video

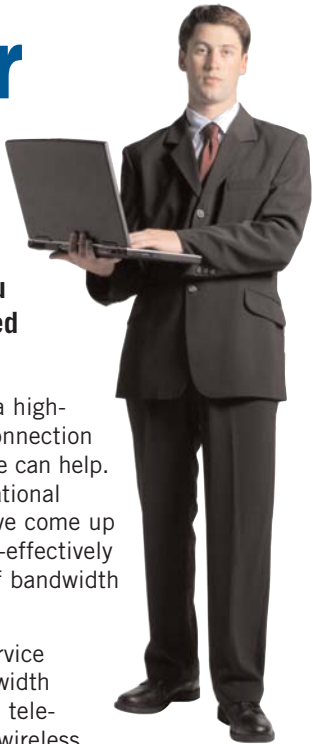

Did you know you can use a high-speed Internet connection to monitor your business or job site from anywhere in the world?

Whether you want to connect your current surveillance system, or build a completely new Internet-based system with high-quality digital video recording, Port Networks can help. Your salesperson would be happy to supply a quote based on your requirements.

FibAir

Fixed Wireless

Get all the speed you need with a dedicated wireless link

If your business needs a high-performance Internet connection at an affordable price, we can help. In partnership with a national fiber-optic network, we've come up with a great way to cost-effectively deliver large amounts of bandwidth to almost any location.

Unlike other Internet service providers who sell bandwidth that's delivered over the telephone network, we use wireless links to connect our customers directly to a Tier One fiber optic network that carries only IP data. As a result, you can avoid costly local loops while also enjoying lower latency and fewer outages.

Because the last link in our network is wireless, you don't need to be located on a fiber route to enjoy the benefits of FibAir, and you'll never have to pay for trenching or switching equipment. Best of all, you can start with what you need today and upgrade at any time, without adding circuits or paying for more than what you need. Our monthly pricing is the best you'll find in Baltimore:

Bandwidth\$49 per Mbps
TransportStarting at \$99

Above pricing is based on a 36-month contract, and does not include installation charges, which vary by location but are typically equivalent to one month of service. Short-term pricing is also available, please ask for details.

Our FibAir wireless service is the perfect

Backup

for mission-critical network connections

Answers to Frequently Asked Questions

What do you need to use Wi-Fi?

Most of today's computers and PDAs (and many of today's phones) come with built-in support for Wi-Fi. Adding Wi-Fi capability to an older device costs about \$30 and takes just a few minutes.

How much does Port Networks Wi-Fi cost?

For in-building customers, standard service is \$9.95/day or \$27.95/month, and Premium service is \$37.95/month. When we build a private Wi-Fi network, our location partner usually bears the cost and access is free to customers.

Is Wi-Fi really secure?

Wi-Fi has a bad reputation for security, largely because people who run their own Wi-Fi networks often forget to "lock" them properly. However, we control access to our network with an encrypted sign-in process, and also offer Virtual Private Networking (VPN) for maximum protection of sensitive data.

Do Wi-Fi signals present any health risks?

There has been no indication that Wi-Fi signals present any health risks. Wi-Fi uses the same radio waves used by cordless phones and baby monitors. Wi-Fi is also limited to very low power levels. A Wi-Fi device typically broadcasts at one or two tenths of a watt, while some cell phones transmit at up to 6 watts.

What do you need to use Video Over Internet?

For remote monitoring, you'll need Internet-enabled cameras or a special device that converts analog camera signals to digital packets. Often, replacing your VCR with a Digital Video Recorder will allow for remote monitoring while also providing much sharper recordings.
